CYBERSHEATH
PRIVILEGED ACCOUNT MANAGEMENT DATASHEET

Privileged Account Management Services

> Anything that involves serious intellectual property will be contained in highly secure systems and privileged accounts are the only way hackers can get in."
>
> — Avivah Litan, VP and Distinguished Analyst at Gartner

> …100% of breaches involved stolen credentials."
>
> — Mandiant, M-Trends and APT1 Report

Recent news coverage of security breaches at well-known organizations may seem to indicate that cyber attackers are winning the race for information. Systematic attackers have seemingly endless resources devoted to developing innovative techniques to gain access to your sensitive data and gain control of your critical IT infrastructure. In 100% of the recent security breaches, a stolen or misused privileged credential is to blame.

All predictions point to privileged account abuse worsening in the future unless organizations take action now. Privileged accounts are a security problem and need a comprehensive security solution put in place to protect, monitor, detect and respond to all privileged account activity. CyberSheath's award winning privileged account management professional services enable you to defend against hackers targeting your privileged accounts and stop the bleeding.

Privileged Account Management Services

WHY CHOOSE CYBERARK PRIVILEGED ACCOUNT SECURITY SOLUTION?

1   **LOW-IMPACT ARCHITECTURE**
Ease of deployment with minimum impact and protects your existing investment in your current IT environment.

2   **SCALABLE AND FLEXIBLE**
All CyberArk components work independently but take advantage of shared resources and data. This flexible approach allows you to begin a project at the departmental level and scale to a complex, distributed, enterprise solution over time.

3   **SINGLE PLATFORM**
CyberArk offers an end-to-end solution, including proactive protection, session monitoring, auditing, and threat analytics from one platform. This single platform enables you to implement consistent policies and securely store all audit records in one access controlled location.

KEY BENEFITS

- Manage Credentials from a Centralized Platform
- Automate Previously Manual Tasks and Workflows
- Centralize Audit Logs and Session Recordings
- Ease of Generating Reports for Compliance Information
- Automate Password Changes Regularly
- Tamper-Proof Storage for Credentials
- High Availability with Built-In Fail-Safe Measures
- Real-Time Behavioral Analytics to Accelerate Remediation Time

WHY CYBERSHEATH

CyberSheath has partnered with CyberArk to address a vast demand for support. Our engineers have trained with CyberArk Implementation Engineers through all phases of CyberArk customer projects.

CyberSheath engineers provide an elevated level of support by not only providing technical expertise, but by also customizing the project for each organization and assisting with administrative tasks for your project and facilitating long term support for customers that require it. CyberSheath delivers solutions that ensure both your short-term objectives and long-term goals are met.
